

# Batch no\_contact Handler

## AI Thursday Meeting

Jérôme Belleman  
2 October 2014

- Many no\_contacts in LXBATCH
- A variety of causes
- Sometimes unnoticed due to scale

Reboot only course of action → Handle them automatically

- Getting notified? → Message queue
- Daemon reading notifications and making decisions
- OpenStack: parse console, reboot, track reboots, ...

```
% nova console-log b609194d6f | grep -i panic  
% nova reboot --hard b609194d6f
```

- Trying to make some sense out of the messages
- Now only logging what the daemon would do
- Servicifying it all: accounts?
- Production status of this message queue?

- Great potential
- Still fiddling, though
- Questions we'll soon be asking:
  - Why don't we catch all `no_contacts`?
  - What will happen with false alarms?
  - We still don't understand everything in the message.

→ We'll need help

# Questions?
